Re: Provigil® (modafinil): Prior Authorization Request Form: Please respond.

- Please complete the attached Provigil® (modafinil) Prior Authorization Request Form
- To expedite the review process please complete all requested fields.
- Completed forms should be faxed to: 1-866-868-0858. It is not necessary to fax this cover page.

Please note: By signing the attached form you are certifying that the treatment requested is medically necessary. No contraindications are present and precautions have been considered. You will be supervising the patient's treatment. Supporting documentation is available in the patient's record. Signature on this form attests to the fact that the corresponding ICD-9 code has been documented in the patients chart and submitted on a CMS- 1500 form.

Information about this drug

Provigil® (modafinil)

Elderly patients are more susceptible to the CNS and sympathomimetic adverse effects of CNS stimulants. Elderly patients with diminished renal and hepatic function will often require a dosage reduction to prevent accumulation of modafinil and its metabolites. The CNS stimulants have a high potential to result in dependence, and complicate the management of hypertension, angina, ischemic heart disease and myocardial infarction. The recommended dose is 200 mg daily (30 tablets per 30 days) as there is no consistent evidence suggesting higher doses confer any additional benefit.

You can make an expedited request by indicating this at the top of the attached form. If you request an expedited review, and sign the attached form, you certify that applying the 72 hour standard review time frame may seriously jeopardize the life or health of the member or the member's ability to regain maximum function.

Information on the attached form is protected health information and subject to all privacy and security regulations under HIPAA.
